

Micronized Creatine Monohydrate

CreActin™ is a high-performance micronized creatine monohydrate engineered for total suspension. By combining a groundbreaking **#510 mesh size** with **2.5x higher bioavailability** than standard brands, CreActin™ eliminates the "grit" of creatine and delivers the most efficient absorption on the market.

The Technical Edge

#510 Ultra-Micronized

Stays in suspension longer, no grit

<50ppm Creatinine

Industry-leading low impurities

Clinical-Grade Purity

Engineered for maximum efficacy and minimal waste

The Grit-free Advantage

Texture Solved. Solubility Mastered. Our ultra-micronized #510 mesh eliminates the formulation hurdles of standard creatine, allowing for seamless integration into any format.

Gummies

- **Grit-Free Texture:** Eliminates the "sandy" bite common in creatine edibles
- **High-Loading Capacity:** Easily achieve loads of 1.5g per gummy without compromising setting or stability

Ready-to-Mix

- **Instant Dissolution:** Stays in suspension longer so consumers don't drink "sludge" at the bottom of the shaker
- **Zero Waste:** Ensures the full dose actually reaches the consumer, not the sink

The Clinical Proof

2.5x Absorption

Outperforms standard creatine by 250% for maximum uptake

60-Minute Peak

Rapid Tmax ensures consumers feel the power in just one hour

IV-Level Efficiency

Demonstrated >100% bioavailability relative to an IV bolus

Superior Saturation

Higher peak plasma levels (19.54 µg/mL for full muscle loading)

The Competitive Edge

- **Better Science:** Backed by comparative PK studies showing 2.5x improved absorption
- **Better Purity:** Significantly lower creatinine levels (<50ppm) than industry averages
- **Better Economics:** Premium performance and superior specifications at a price point that protects your margins
